SUMMARY

- I am a researcher in Artificial Intelligence with a highly interdisciplinary perspective. This enables me to develop approaches by integrating methodologies from Computer Science, Philosophy, Psychology, Sociology, Intelligence Analysis, and Communication Theory.
- Generally, I investigate the reasoning and behaviour of intelligent agents in hybrid societies. In particular, I am interested in aspects of knowledge-sharing interactions such as reasoning, communication, information dissemination, and explanation, in heterogenous Open Multi-agent Systems. I am also curious to understand the legal, ethical, and safety aspects of these social interactions, with a particular focus on deception.
- Areas of research: Agent-Based Modelling & Multi-Agent Systems; AI Ethics; Explainable AI; Deception.
