SUMMARY

- I am a researcher in AI whose perspective is highly interdisciplinary. This enables me to develop approaches that go beyond Computer Science, by integrating methodologies from Philosophy, Psychology, Sociology, Intelligence Analysis, and Communication Theory.
- My interests revolve around machine deception, self-explainable agents that have the ability to model other minds, and the ability of AI agents to tell stories. More generally, I am interested to understand AI behaviour inside social environments like hybrid societies, in order to ensure that their behaviour adheres to social norms and to ethical, legal, and safety standards.
- Areas of research: Deceptive AI; Agents & Multi-Agent Systems; AI Ethics; Explainable AI; Safe & Secure AI.
